

Target Indication

Target indication enables you to quickly and effectively describe a target's location to the other members of your section, or quickly and effectively visually identify a target being indicated to you by someone else.

The Direct Method

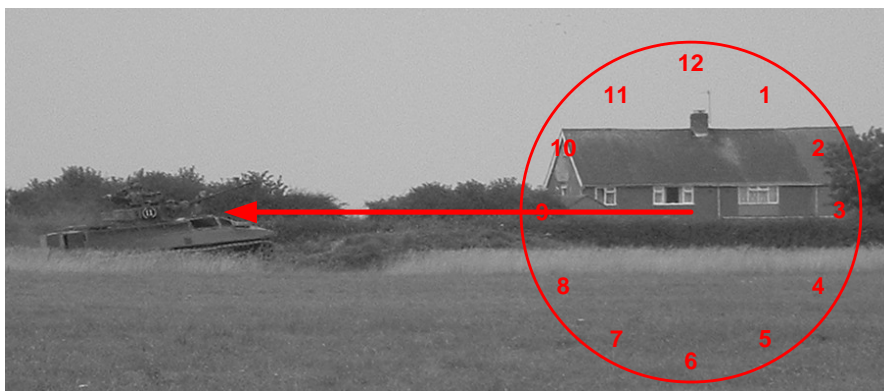

Used for obvious targets on or near the lines shown. Remember to tell the section where the axis line is.

Reference Points

If prominent objects are clearly visible i.e. a farm house or loan trees, these can be given a specific name or 'reference' so that the whole section can quickly visually locate them.

Clock Ray Method

Remember to place the clock face on a reference point and not imagine yourself as the centre.
